last occ. of char

Method 1: left to right

Method 2: right to left

Method 3: built in fun ⇒ strchr()

⇒ abcddedf (0 1 2 3 4 5 6 7)

⇒ output = 6

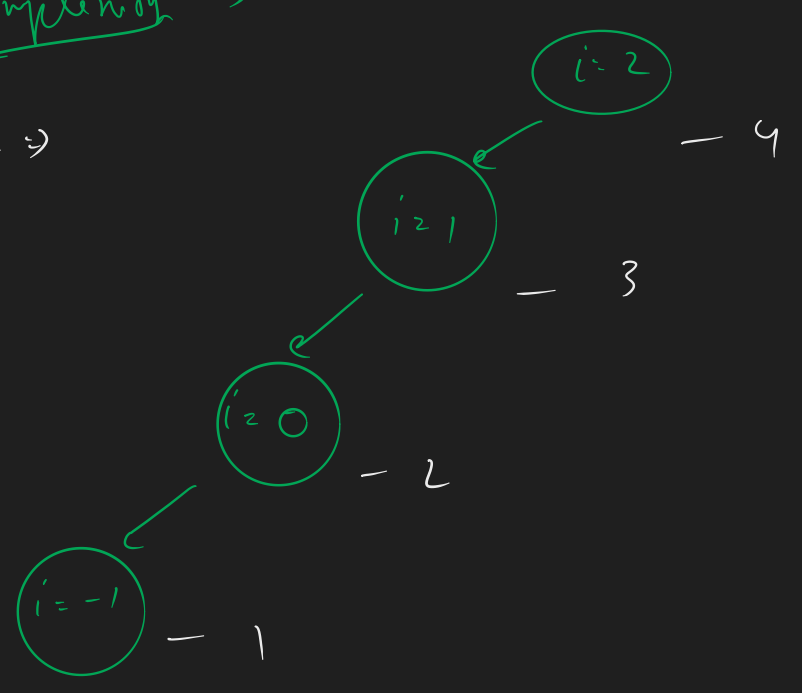
Sol →

```
fun( str, ch, n, i=n-1 )
{
    if ( i > n-1)
      {  return -1;
      }
    if (str[i] == ch)
      {  return i;
      }
  fun ( str, ch, n, i-1);
}
```

Time Complexity ⇒

"abc" (0 1 2) x = "d"

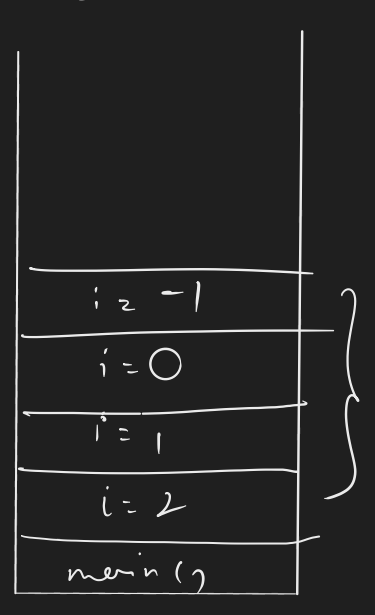
worst case ⇒



Total calls for n = 3 is 4.

$O(n+1) \Rightarrow O(n)$

Space Complexity "abc" (0 1 2) x = 'd'



Total 4 entries

$O(n+1) \Rightarrow O(n)$
