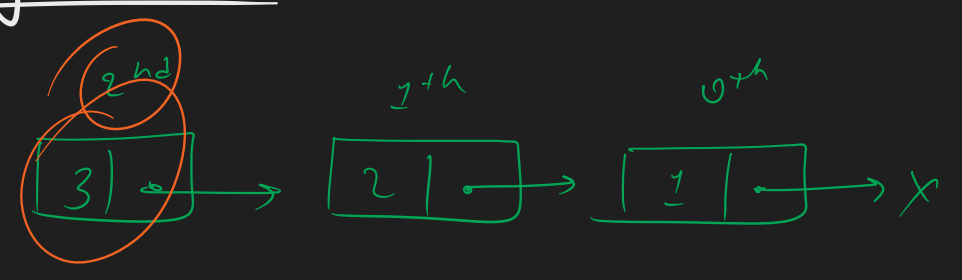
LL Assignment = 1

K^{th} node from the end ⇒

Ex ⇒

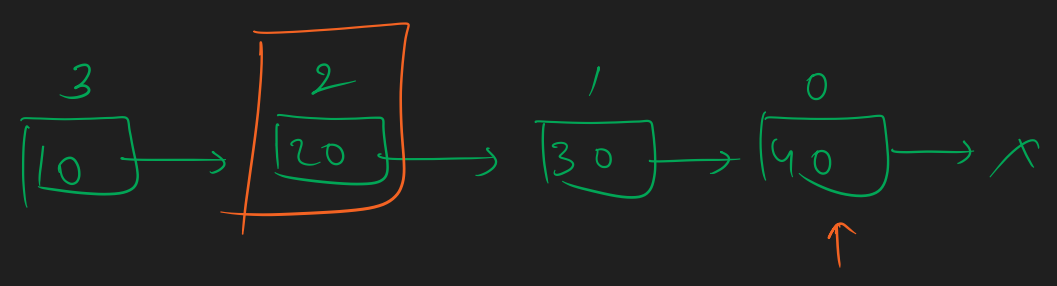


Start from end & goes upto k^{th}

⇒ pos = 2

& Ans

Ex ⇒



① $k = 2$

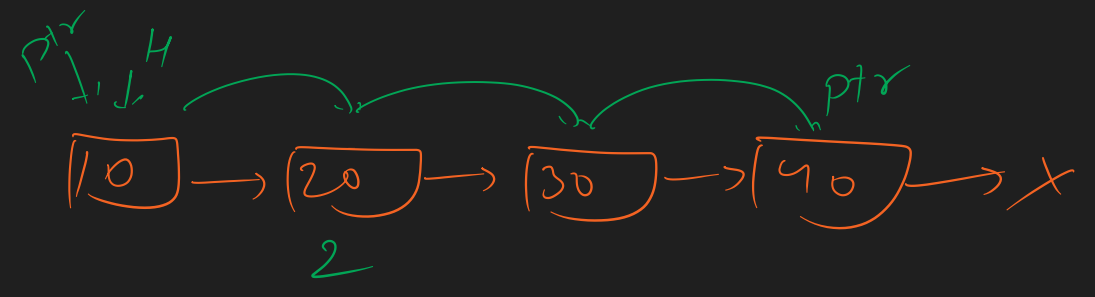
Store into arr

0	1	2	3
10,	20,	30,	40

$n - k$

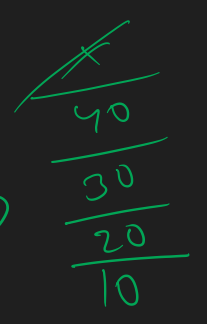
$4 - 2 = arr[n-k]$ Ans

② ⇒



pos = 2

⇒



```
void solve(temp, pos, &ans)
{
    if (temp->next != NULL)
    {
        return;
    }
    solve(temp->next, pos, ans);
    if(pos==0) ans = temp->data;
    pos--;
```

⇒ Method 2 ⇒ Using Recursion

Method 3 ⇒ ① find size of LL = n

② from head to [n - k]
